

Assignment #6 (Due: 10-Mar-2021)

Back in January (of this year), January 20th to be exact, we had a **'palindrome date'**: 1-20-2021.

The sequence of digits '1202021' can be read and produce the same string when they are read from either the beginning or the end.

Write a Python code snippet to list all palindrome dates within the current millennium:

From: 01-01-2001

To: 12-31-3000

You should check the 'MM-DD-YYYY' format only.

The output also should be in this format: MM-DD-YYYY.
